

Git basic commands

Configuring git for the first time

```
git config --global user.name "yourusername"
```

```
git config --global user.email "youremailid"
```

Initialize the empty repository in the project folder

```
git init
```

To check status of the files

```
git status
```

To track / stage the files

```
git add "fileName"  
  
// if you want to add all the files  
  
git add .
```

To check the remote url

```
git remote -v
```

```
//empty denotes you've not added remote url
```

To push or pull the changes

```
git push origin master  
git pull origin master
```

To add remote origin

```
git remote add origin "remote_url"  
  
// you'll get remote url in the github while creating the new repo
```
